INSEAD Working Paper Series

Re: Working paper submission of "A Channel-Conditioned Perturbation Theorem for Hidden Schur-Complement Resolvents"

Dear Working Paper Series Editors,

I am submitting "A Channel-Conditioned Perturbation Theorem for Hidden Schur-Complement Resolvents" for inclusion in the INSEAD Working Paper Series.

The paper develops a theorem-driven framework for hidden inverse channels in Schur-complement resolvents and connects the theory to numerical linear algebra, robust control, model reduction, and empirical settings where visible input-output fit may obscure fragile internal mechanisms.

The working-paper version is prepared for public circulation and includes a final Summary of Notation page for readers. The manuscript is also suitable for SSRN dissemination through the INSEAD series if appropriate.

Thank you for considering the paper for the series.

Sincerely,

Philip M. Parker
