arXiv Submission Note

Re: arXiv posting of "A Channel-Conditioned Perturbation Theorem for Hidden Schur-Complement Resolvents"

To whom it may concern,

This note accompanies the arXiv version of "A Channel-Conditioned Perturbation Theorem for Hidden Schur-Complement Resolvents".

Recommended arXiv classification: primary math.NA, with optional cross-lists math.OC and eess.SY.

The source is self-contained LaTeX with an inline bibliography and a Python appendix for table reproduction. The PDF is included for reference, but the LaTeX source should be treated as the primary arXiv upload file.

The public version identifies the author and includes public acknowledgements.

Sincerely,

Philip M. Parker
